Project Overview

Standard Quality Check Add-on is very simple and seamless process to do the quality check transaction on inward materials and outward materials and also periodical (re-QC) on any materials. This add-on will work on batch items as well as without batch items. System will manage different layer as per batches. If there are multiple batches are available in a single items and there are multiple items in a single document this add-on will allow user to do partial QC as per batch and also user can apply authenticate the transaction by their superior.

This add-on will enable user to check the quality check queue (pending documents for quality check) and from the report itself user can perform the quality process. Once the quality check will be done the queue will be removed the completed documents or items (if partially).

Problem

Client wants to develop a SAP B1 Add-on - “Standard Quality Check”. Add-on will enable user to do quality check to ensure the quality of received materials from supplier and the material which they received from production and also user will able to do re-QC if required. The QC parameter is flexible to set the with items and user can set the expected value of the materials.

Solution

Based on the Client requirements, Silver touch proposed solution of .NET Framework (version 5.0) and SQL, Silver Touch have developed application as per the requirement of the client. The administrator user will able to manage whole system application. All the backend transaction has been route through manager user.

Result

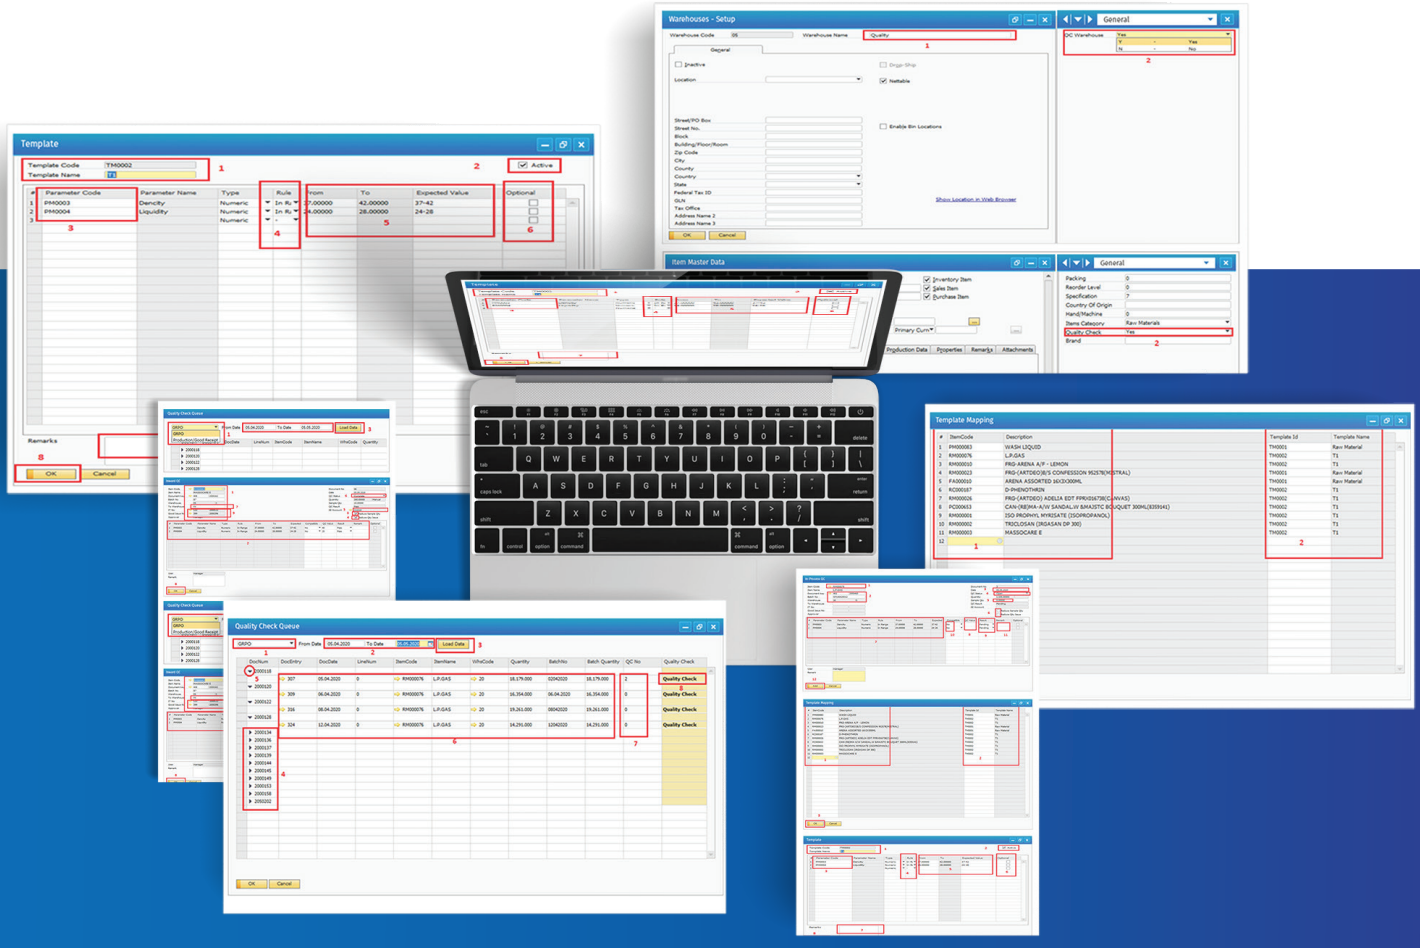

- Project is successfully deployed at client environment.

Benefits

- Clean and manageable complex process.
- Reporting made easy.
- Control over the different process through the validation at each stage for issue and receipting quantity.

Before we go into the QC module details we should check the other settings related to the QC is required. QC process is depending upon some mandatory setting under Item and warehouse. Please make the relevant changes on the said master according to the below figures.

- Parameter Master
- QC Template Master
- Template Mapping Master
- QC Queue
  - Inward QC
- In-process QC: In-process QC can be done using Quality Check Queue or manual enter by using In-process qc from QC Document then user need to fill all the said details one by one
- Re-QC: Re-Qc is one of the document where user can check the material status as per there nature, some organization do time to time QC check to meet the customer expectation and ensure the product quality. Re-QC can change the status QC status hich was tested before.

Young. Agile. Lean. Competitive.

Silver Touch from the day of its establishment in 1995, is endowing clients, enterprises with its innovative IT Solutions. Our team of experts from all walks of applied sciences and work together to deliver super-smart organizational intelligence.

SAP Services We Offer

- SAP Business One Cloud Solutions
- SAP Business One Mobility Solutions
- SAP Business One Reporting & Analytics
